
Standowin

The gateway to the bright world of colour.

Offering several functions to facilitate day-to-day work, Standowin enables users to have constant access to all the latest colour formulae. Its large database contains a wealth of features including:

- A vast collection of colours from all leading car brands,
- Colour registers and
- Fleet colours.

Although Standowin allows users to search for a formula based on a previous determined coding, users can also search for results based on the Genius measurement system.
